⚡ ZAPIER AUTOMATION PROJECT

Automating Job Application Screening for TechNova

Google Forms → Zapier → Google Sheets / Slack / Gmail

3	5	9	0
Routing Paths	Filter Rules	Zap Steps	Manual Reviews

Submitted by: Gloria Njorteah | TechNova Hiring Platform Automation | March 2026

Project Overview — The Problem & Solution

TechNova receives 20–50 applications/week. Manual screening was draining HR capacity.

✕ THE PROBLEM

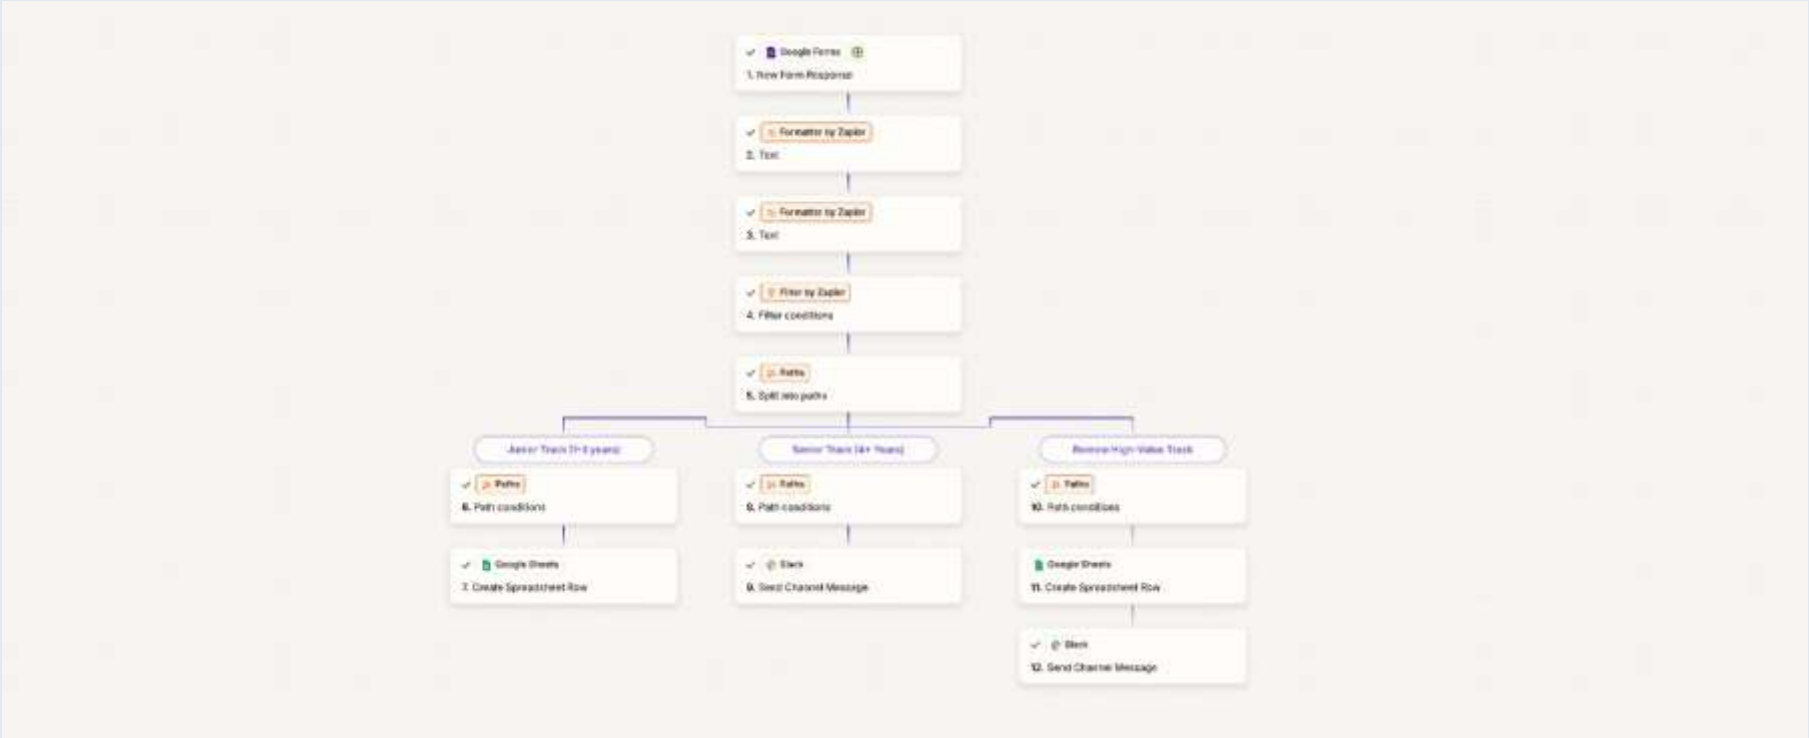
- HR manually reviewing every submission
- Applicants lacking Python slipping through
- Messy experience data: '5+', '3-5 years'
- Unsupported locations not filtered out
- Senior talent waiting days for response
- No consistent candidate acknowledgement

✓ THE SOLUTION

- Auto-trigger on every Google Form submission
- Clean & split name + extract numeric years
- Filter: Python + 1+ yr + supported location
- Junior (1–3 yrs) → Google Sheets batch log
- Senior (4+ yrs) → Instant Slack alert
- Auto confirmation email to every applicant

Step 1 — Google Form: TechNova Software Developer Application

The entry point — structured data collection ensuring consistent applicant input



TechNova Software Developer Application — Google Form 6 required fields: Name, Email, Experience, Skills (Checkboxes), Other Skills, Work Location

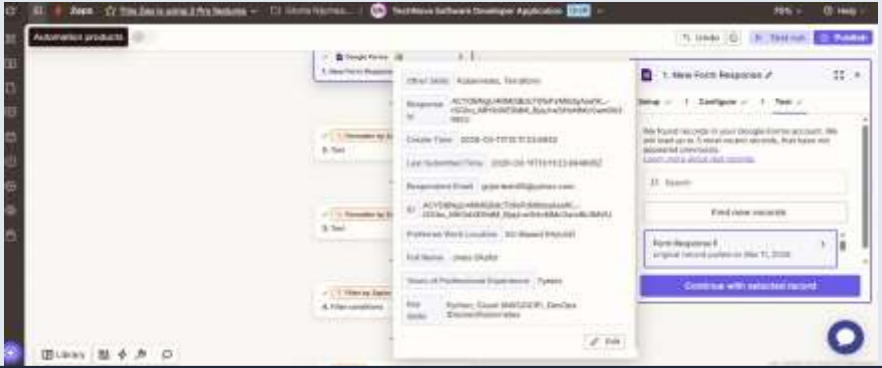
Zap Architecture — 9-Step Automated Pipeline

Full workflow from Google Forms trigger through to Slack, Sheets and Gmail

Steps 2 & 3 — Formatter: Data Cleaning

Split full name into First/Last · Extract numeric years from messy text like '5+' or '3-5 years'

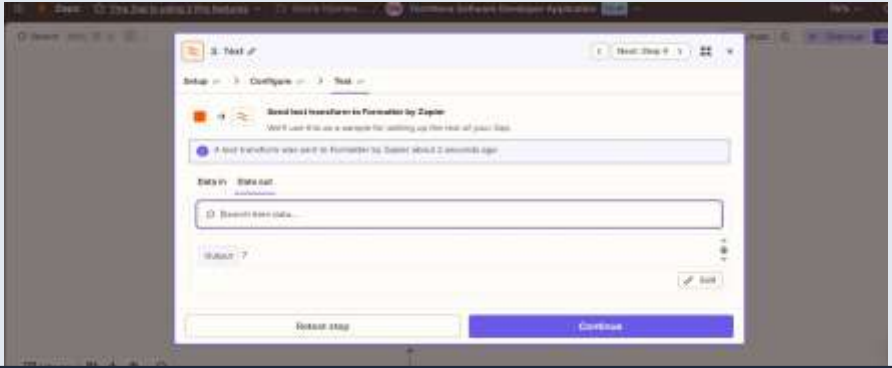
TRIGGER DATA IN



Step 1 — Google Forms New Response James Okafor · 7years · Python, Cloud, DevOps

STEP 2: SPLIT NAME

STEP 3: EXTRACT YEARS



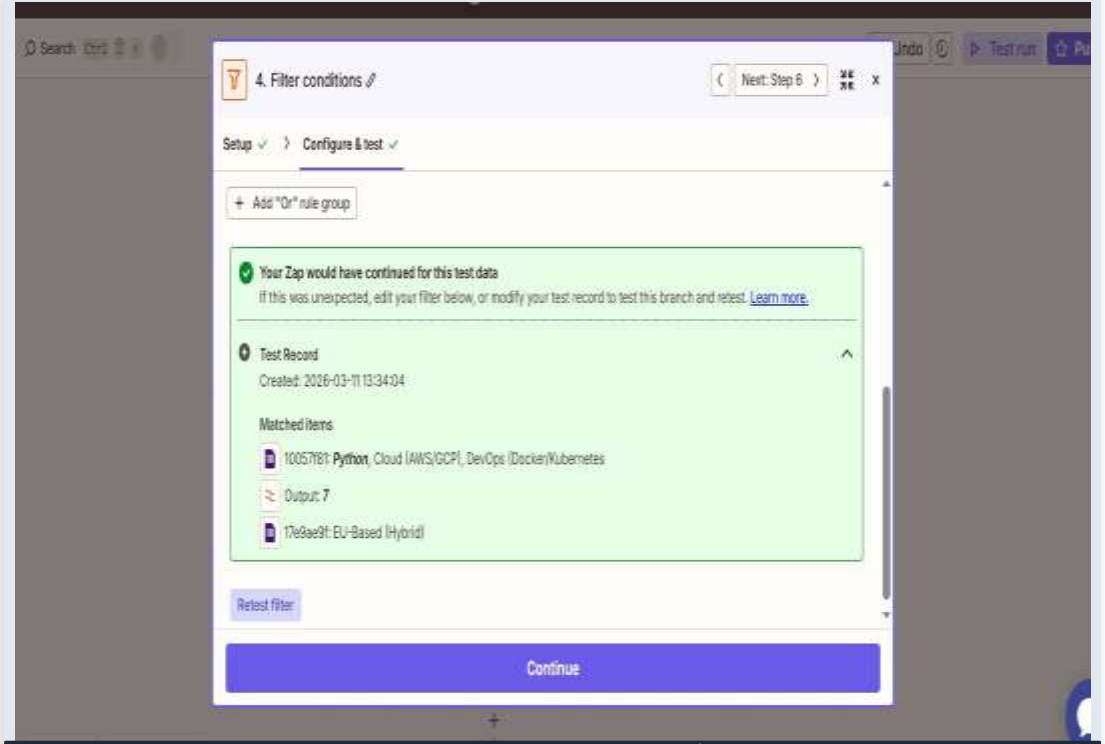
Formatter — Extract Number Input: '7years' → Output: 7 (clean integer)

Why This Matters

- Applicants never fill forms consistently.
-
- Extract Number handles: '5+', '3-5 yrs', '2 years', '10'
-
- Returns the first/lowest number — conservative & fair
-
- Enables accurate numeric filter in the next step

Step 4 — Filter: Qualification Gate

Three AND conditions must all pass — fail any one and the Zap stops completely



Filter Conditions — Step 4 Green = Your Zap would have continued ✓ | Test record: Python, Output 7, EU-Based

Has Python Skill

Key Skills (Text) Contains 'Python'

1+ Year Experience

3. Output (Number) Greater than '0'

Supported Location

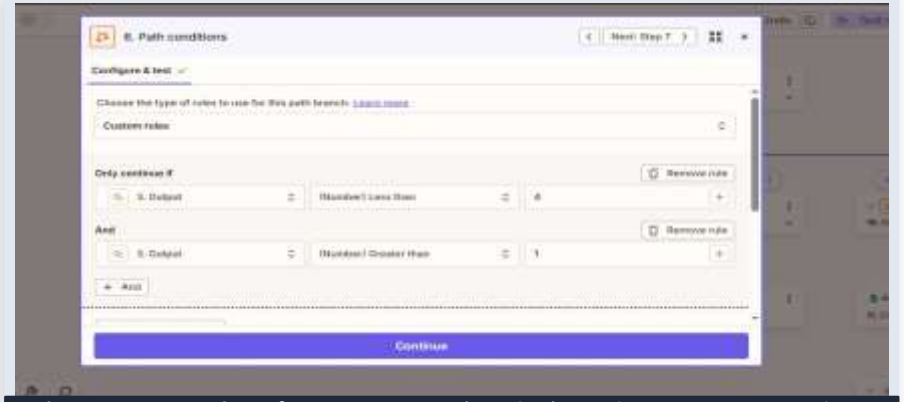
Work Location does not contain 'Other (not supported)'

✗ Fail any condition → Zap stops. No Slack, no Sheets, no email.

Step 5/6 — Path A: Junior Track → Google Sheets

Applicants with 1–3 years experience are logged to Google Sheets for HR batch review

PATH A CONDITIONS

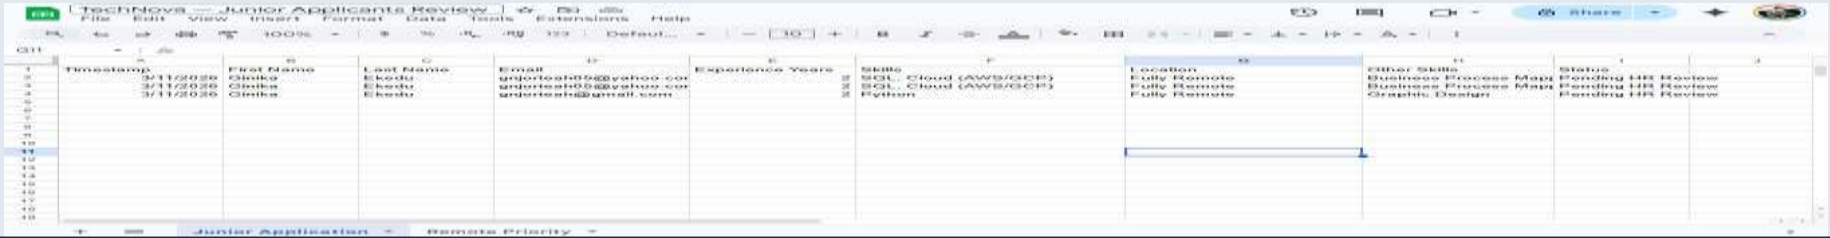


Path A — Junior Track Configuration Output (Number) Less than 4 AND Greater than 1 — catches 2 & 3 year applicants

What Gets Logged to Sheets

- ✓ Timestamp (date/time)
- ✓ First Name + Last Name (split)
- ✓ Email Address
- ✓ Experience Years (numeric)
- ✓ Skills (comma-separated)
- ✓ Location · Other Skills
- ✓ Status: 'Pending HR Review'

GOOGLE SHEETS RESULT



TechNova — Junior Applicants Review Sheet Columns: Timestamp · First Name · Last Name · Email · Experience Years · Skills · Location · Other Skills · Status

Step 5/8 — Path B: Senior Track → Slack Notification

Applicants with 4+ years experience trigger an immediate Slack alert for interview scheduling

PATH B CONDITIONS

Path B — Senior Track Configuration 3. Output (Number) Greater than 3 → catches 4,

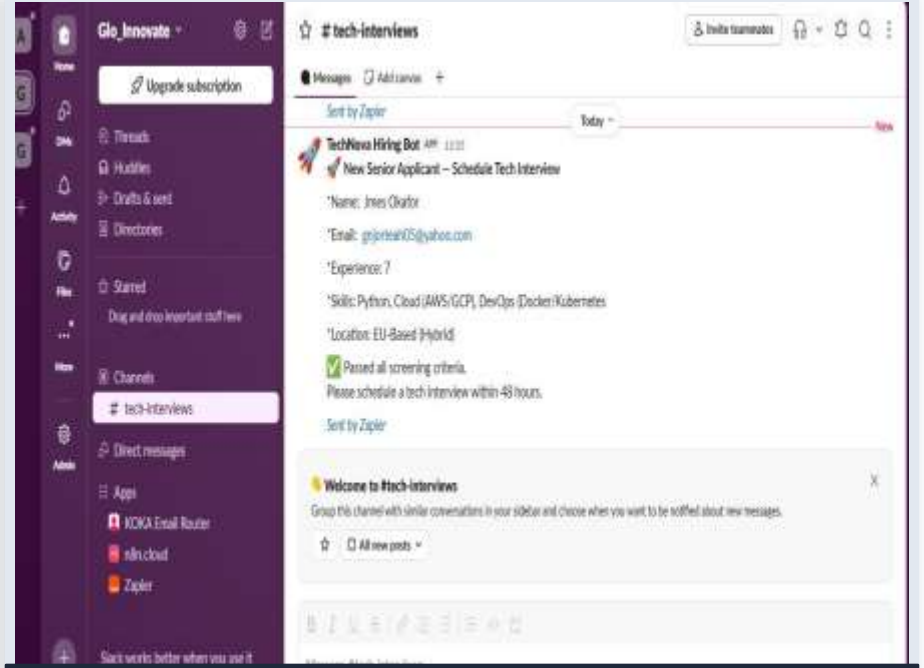
Response Time Improvement

Before automation: 3–7 days manual review

After automation: Slack alert within seconds

Interview scheduled: Within 48 hours guaranteed

SLACK NOTIFICATION RESULT



Slack — #tech-interviews Channel TechNova Hiring Bot · Jmes Okafor · 7 years · Python, Cloud, DevOps · EU-Based (Hybrid)

Pipeline Live — Outcomes & HR Benefits

What TechNova's HR team gains from this automation

Zero Noise

Unqualified applicants (no Python, <1 yr, bad location) filtered silently. HR never sees them.

Organised Juniors

1–3 year applicants batch-logged to Google Sheets. HR reviews on their schedule, not ad hoc.

Instant Senior Alerts

4+ year candidates trigger Slack within seconds. Interviews scheduled in 48hrs vs 3–7 days.

Remote Priority Track

Fully Remote + Python applicants flagged separately for 24-hr fast track review.

Pro Candidate UX

Every qualified applicant gets an instant personalised confirmation email. Brand stays polished.

24/7 Screening

Pipeline runs continuously. No human needed at screening stage. HR effort saved every week.

Built with: Google Forms · Zapier (Formatter, Filter, Paths) · Google Sheets · Slack · Gmail | Submitted: March 2026
